

Pre-Application Site Visit Report

Project 6290471, 1201 ALASKAN WAY S

Assessment Completed: 11/15/2012

Project Description: Demolish crane maintenance building (NE) and associated steel canopy structure at Port of Seattle, T-46. Footings and slab on grade to remain per plan. (Support activity for HWY 99 viaduct replacement).

Primary Applicant: [Andrew Ziegler](#)

This report lists a preliminary assessment of project requirements based on your pre-application site visit (PASV). The PASV is completed by site inspectors from the Department of Planning and Development (DPD).

Next Steps

1. Review the requirements in this report and contact the staff members listed below with questions.
2. Schedule an appointment for permit application intake with DPD. **Please bring a copy of this report to your intake appointment.**

Questions About This Report

If you have questions about the information in this report, contact:
Roger E Moore, (206) 733-9039, Roger.Moore@seattle.gov

Pre-Application Site Visit (PASV) Requirements

PASV report requirements may be subject to additions, changes, or modifications by the department. The purpose of the report is to alert the applicant that there may be unusual or complex site conditions that trigger requirements from the department regarding this project. **The applicant is responsible for providing all required documents at the intake appointment.** If you have questions about this report or the PASV process, please contact the DPD Site Development Team at (206) 684-8860.

Note: Any project application associated with the development site can utilize the results from this PASV if the application is accepted by DPD within 18 months of the above inspection date. After 18 months, the applicant must apply for another PASV. No extensions will be granted.

The site plan did not include the following existing or proposed elements:
Nothing noted on drawing submitted for Pre-Application Site Visit.

ECA Mapping Unit and Type

This project site appears to include the following ECAs and/or buffers:

Liquefaction
Flood prone
Fish and wildlife

Shoreline habitat

Earth Disturbance

In addition, provide detailed cross-sections for: depth of excavation for removal of existing foundation.

Potential Impacts to Seattle Parks Property

No parks property in vicinity

Tree Protection

Existing trees appear to be shown accurately on the site plan

Construction Stormwater Control

All projects with earth disturbance, regardless of size, require temporary and permanent stormwater control in accordance with the Construction Stormwater Control (CSC) Technical Requirements Manual (DR 16-2009, Volume 2). The CSC Best Management Practices (BMPs) noted below can be found in the Construction Stormwater Control Technical Requirements Manual, available online and from DPD's Public Resource Center.

Show the following on the CSC/Post Construction Soil Amendment Plan:

Cover bare soil with compost blankets, straw, mulch, matting, or other approved equal to control construction stormwater runoff.

Cover stockpiles and bare slopes with compost blankets, tarps, matting or other approved equal to control construction stormwater runoff.

A First Ground Disturbance inspection is required before any ground disturbance related to this permit, including demolition, tree cutting, clearing, grubbing, and grading. After your permit is issued, schedule an inspection by calling (206) 684-8900 or online at: <http://web1.seattle.gov/DPD/InspectionRequest>

Inspectors Notes

No additional Inspector's notes.

Standard Submittal Requirements for Projects in an ECA

Delineate the clearing limits on the site plan

Site is mapped as liquefaction prone. Geotechnical report and/or structural calculations are required to address liquefaction potential and, if needed, mitigation (see SMC 25.09.100)

Site is located within the 100-year flood hazard area. Refer to SMC 25.09.120 and SMC 25.06 as well as the Floodplain provisions of the Seattle Building Code or Seattle Residential Code for details. The lowest floor elevation of any structure located in a flood-prone area shall be no less than 2 feet above the 100-year flood elevation. For projects adjacent to Puget Sound (Puget Sound floodprone area), the minimum base flood elevation (BFE) is 10 feet - National Geodetic Vertical Datum.

Site is mapped as being within a fish and wildlife habitat area. The characteristics of the fish and wildlife habitat area will be used to evaluate development within wetlands, riparian corridors, steep slopes, and designated habitat areas

Show 100-foot shoreline habitat buffer. All residences must be 25-feet or more from the ordinary high water mark (OHWM). See SMC 25.09.200
